# **KNOX® MedVault® Drug Locker**

**KNOX®**  
Serving First Responders Since 1975

## Drug diversion is a growing problem –

a problem that has impacted all areas of society including those within the EMS community. As the issue has grown, the need for controlled substance security has increased. *Departments need to protect the medical registration and licensing of their department and employees while still providing a high level of care to those in need.*

It's a balancing act that many are finding more difficult to manage.

### Three MedVault® models available

*The Knox® MedVault® Drug Locker is the solution many EMS providers are turning to.*

#### With the Knox® MedVault® Drug Locker

- Narcotics stored on site or in rescue vehicle in a locked vault
- Access limited to only those with authorized PIN codes
- All access recorded in an audit trail
- Drug Diversion difficult and minimized
- Exposure to legal and regulatory sanctions reduced

EMS providers can significantly reduce the risk of carrying controlled substances by installing the Knox® MedVault® narcotics locker. With this drug locker, access is limited to only those with an authorized PIN code helping to minimize diversion of the controlled substances.

All activity at the unit is collected in an audit trail. This audit trail is collected via a USB port or from the convenience of the administrator's office with optional WiFi/Ethernet connectivity. Utilizing the WiFi version, the Knox administrator can download the audit trail, update PIN Codes or update firmware without having to physically connect to each unit. The audit trail provides the department accountability regarding access to controlled substances. Put a safeguard in place and implement the MedVault for all narcotics storage.

#### MedVault®

The basic model MedVault records an audit trail providing a time and date stamp, including user ID for each activity. The audit trail is collected via USB port.

#### MedVault® 2

MedVault 2 is for those departments with WiFi or considering WiFi, The MedVault 2 is available either WiFi capable or WiFi enabled. With the WiFi option, all administrator functions can be performed from the convenience of the administrator's office. There's no need to travel to each individual unit to download the audit trail, update PIN codes or update firmware.

#### MedVault® Mini

The MedVault Mini is a smaller version of MedVault for those departments with limited space or smaller storage needs. The MedVault Mini is available in a basic model, WiFi capable and WiFi enabled.

## Features

- Unit opens with PIN Code authorization
- Audit trail stores 25,000 events
- Room for 1 to 5,000 unique PIN codes
- Connects to PC USB port to collect release history
- Optional WiFi Capable or WiFi Enabled
- Optional interior LED lamp
- Light weight construction designed for use in vehicles
- Operates with a single 12 volt power source

## MedVault® Software

Knox MedVault Administrator software allows a department to manage all PINs needed to access the vault. Additionally, the audit trail history is accessed using the application software. All MedVault files are encrypted and require a password to access.

MedVault software is written for emergency responders and allows a department to program their units for varying degrees of security to meet the unique needs of their department.

## Flexible Personnel Access

Knox MedVault can be programmed several ways to best suit the needs of your department

- **24/7 Access**
  - An individual with a valid PIN can open the vault at any time
  - Two individuals using co-dependent PINs can open the vault together at any time
- **Shift Access**
  - An individual with a valid PIN can open the vault only when their shift is on-duty
  - Two individuals using co-dependent PINs can open the vault together only when their shift is on-duty
- Additional security scenarios available; contact your local Knox account manager for details.

## Optional WiFi Administration

- Program and collect data remotely
- Perform administrative duties from central office
- Knox WiFi conforms to the 802.11b/g standard
- Knox Enterprise WiFi conforms to the 802.1x standard (coming soon)
