

If you are considering using Network communication for administration of the Knox Keysecure 6, this guide provides the background information necessary to help determine the best solution to match the needs of your department. All Knox Keysecure 6 units are built to order.

Information for agency's IT department

- Knox WiFi conforms to the 802.11 b/g/n standard
- Knox Ethernet conforms to the 802.3 standard
- IPv4 Local Addressing

Supported Security/Encryption

- Open (no encryption)
- WEP - 40/104 characters (ASCII)
- WPA-PSK - TKIP
- WPA/WPA2 - Mixed
- WPA2-PSK - AES

Ports required for communication

- 443 - SSL communication
- 123 - Network Time Protocol

Information on your network needed for successful ordering and implementation

To properly order and install the Knox Keysecure 6 system on your network, your network administrator will need to know the answers to the following questions.

- Do you use static IP addresses on your network?
- Do you have Internet access on your network?
- What Operating System (OS) are you using? Which version?
- What encryption do you use on your wireless network?
- Will you be using WiFi or Ethernet?
- If using WiFi, what is your SSID?
- If using WiFi, do you know pass phrase?
